

AMRAD

The Recognized Symbol of Superior Performance

AMRAD
"S" TUBE
RECTIFIER No. 3000
Rating—20 watts
Voltage 300 - 750 v.
Capacity 50 M.A.
Price—\$8.00

The Ideal D. C. Supply

AMRAD "S" TUBE 3000 is finding increasing favor with relay men as a reliable and efficient rectifier of high voltage alternating current. It requires no filament heating current and is therefore exceptionally long lived—3000 hours and upwards can be expected.

"S" TUBE 3000 passes sufficient current to operate two five-watt power tubes and for this purpose the Tube is expressly designed.

A high voltage supply consisting of two AMRAD "S" TUBES 3000 and AMRAD MERSHON ELECTROLYTIC CONDENSERS is ideal for 10 watt C.W. or telephone transmitters. "S" Tubes, being free from "back leak," and Mershon Condensers, providing a capacity of 30 mfd. each, insure freedom from annoying hum or growl.

Mershon Condensers are now shipped filled with Electrolyte permitting easy and quick installation.

Bulletin E sent free on request describes both the AMRAD "S" TUBE RECTIFIER and MERSHON ELECTROLYTIC CONDENSER and gives wiring diagrams. Complete Amrad Catalog 10 cents in stamps.

AMRAD
M.E. CONDENSER
No. 2747
Price \$8.00
